We offer a 3-in-1 eye drop for cataract surgery!

The 3-in-1 drop is a combination of the three separate eye drops, normally ordered to your pharmacy, to use after cataract surgery. The cost is \$100 which also includes a roll of medical tape needed to adhere your eye shield after surgery.

This price is a cash-pay option; we do not file insurance for this drop since the price is typically lower than what you would pay for the three separate prescription eye drops.

You may purchase your drops the morning of your surgery at Vision Eye Group (clinic side). You will receive your tape after surgery.

We also have smaller bottles available at the Vision Eye Group (clinic side) for \$55 should you run out and need more.

If any patient needs a small **refill bottle**, they will be available Monday – Thursday 8:00 – 5:00 and Friday 8:00 – 12:00.

Directions for the 3-in-1 drop:

After your surgery (in the operative eye):

Use 1 drop, 4 times a day for one week; use 1 drop, 3 times a day for one week; use 1 drop, twice a day for one week; then use 1 drop, once a day for one week - for a total of 4 weeks.

Lid Scrub:

It is recommended to use a lid scrub prior to surgery to help prevent infection. The lid scrub would be used 4 times a day starting 4 days prior to surgery. We recommend OcuSoft Lid Cleanser. It is available at Wal-Mart, Kroger and various drug stores.

Surgery Day:

Please take your eye drops with you to the surgery center. This allows us to verify you have the correct drops and go over your after-care with you.
